

Abstract of the Disclosure

This invention relates to a novel non-rotating wheel cover for use with vehicle wheels. More particularly, this invention pertains to a wheel cover which fits over the central part of a vehicle wheel and remains stationary when the vehicle wheel is rotating. A wheel cover assembly comprising: (a) a wheel cover disk; (b) a hub arm which is removably attachable to the interior face of the wheel cover disk; (c) a weight which is connected to the base of the hub arm; (d) a base plate which has stud receiving holes formed therein, the base plate being rotatably connected to the hub arm.
